

Nokia 7705 Service Aggregation Router

Release 20.4

The Nokia 7705 Service Aggregation Router (SAR) portfolio provides service adaptation, aggregation, and routing over an efficient, feature-rich Ethernet and IP/MPLS/segment routing infrastructure. With interfaces supporting a wide range of access protocols, it is well suited for mobile backhaul, fixed-mobile convergence, mission-critical and enterprise applications.

Leveraging the powerful Nokia Service Router Operating System (SR OS) and the Nokia Network Services Platform (NSP), the 7705 SAR delivers industry-leading IP/MPLS/segment routing and Pseudowire capabilities. Designed for scalability, it utilizes programmable processors to accommodate new standards and requirements associated with data plane operation. It is available in compact, power-efficient, indoor and outdoor platforms that support highly available services and applications over flexible network topologies.

Easy legacy TDM migration

The 7705 SAR portfolio offers a comprehensive set of T1/E1, T3/E3, SONET/SDH, serial data, electrical utility teleprotection and analog voice interfaces along with software features for asymmetrical delay and jitter compensation to ensure that legacy applications perform exactly as they did on TDM networks. Critical traffic is expedited when using either high-speed Ethernet or legacy low-bandwidth links to ensure application performance. Numerous migration features allow operators to gracefully move their applications onto their new IP/MPLS/segment routing network.

Routing and resiliency

The depth of its IP/MPLS/segment routing protocol implementation and robust OAM capabilities at all levels set the 7705 SAR apart from its competitors. A thorough implementation of the standards provides greater resiliency and more options and flexibility for service definition.

The 7705 SAR's IP and MPLS scale gives network operators the potential to grow their networks, adding many end users and applications without having to make additional capital investment.

The 7705 SAR provides excellent resiliency to link or equipment failures through redundancy and the ability to quickly reroute traffic. The 7705 SAR delivers network reconvergence in tens of milliseconds using a strong suite of dynamic routing and recovery capabilities. Superior network resiliency reduces network down time and improves operations staff's productivity, helping to reduce operating costs, improve end-user satisfaction, and allowing service providers to offer higher-value service level agreements (SLAs).

Robust security

The 7705 SAR provides a robust set of security features to maintain network integrity in the face of cyberattacks such as session hijacking, spoofing, and denial of service attacks. The 7705 SAR firewall is application-aware and mitigates attacks, such as Domain Name System (DNS)/Internet Control Message Protocol (ICMP) replay. It uses application-level gateways to ensure extra security for FTP/T-FTP connections. 7705 SAR hardware-based encryption features, including IPsec, Network Group Encryption and advanced key exchange algorithms, prevent man-in-the-middle attacks. All 7705 SAR security features provide high throughput levels while minimizing latency.

The portfolio is FIPS 140-2 compliant on both the control and data planes. Operators can use the 7705 SAR to safeguard critical infrastructures and address regulatory requirements, such as North American Electric Reliability Corporation (NERC) Critical Infrastructure Protection Version 5 (CIP V5).

Quality of service

Service Router Operating System (SR OS) software provides superior quality of service (QoS) on the 7705 SAR. The same level of deep buffering and support for ingress and egress shaping that is available on Nokia's edge and core routing platforms is also available on the 7705 SAR aggregation platform. Consistency of traffic engineering and shaping across the network provides higher packet routing performance overall with differentiated service treatment. This facilitates the convergence of fixed and mobile traffic for service providers as well as operational and business services traffic for mission-critical network operators. SR OS software allows for advanced service offerings, and delivers efficient network resource usage, customer satisfaction and retention.

Precise timing and synchronization

The 7705 SAR provides microsecond timing and accurate synchronization to support mobile base station requirements and the migration of TDM-based services onto the packet network. Timing accuracy and performance over packet are enabled with a combination of built-in architectural features, integrated Global Navigation Satellite System (GNSS) receivers, Nokia Bell Labs algorithms, accurate hardware time-stamping, and powerful QoS mechanisms, which minimize the delay and delay variation experienced by synchronization traffic.

Microwave awareness

When used together, the 7705 SAR and Wavence Microwave systems have a number of features that improve routing performance and resiliency over microwave links. A 7705 SAR router and its subtending microwave systems are treated as a single network element with one IP address, simplifying operations and administration. This allows for bandwidth notification, IEEE 1588 synchronization, faster fault detection, and rerouting with various microwave redundancy architectures supported. The microwave systems can be powered from the 7705 SAR system reducing space and cost.

Field longevity

The Nokia 7705 SAR portfolio is packaged in a wide range of form factors to accommodate the density and types of services required at any location. It provides both indoor and outdoor mounting solutions combined with extended temperature range and power-over-Ethernet (PoE) options. Fanless and conformal-coated variants allow the 7705 SAR to be used in harsh environmental conditions.

7705 SAR platforms are mechanically hardened with a robust electromagnetic compatibility (EMC) design. Several platforms comply with the IEEE 1613, IEC 61850-3 and EN 50121-4 standards for power substations and railway environments.

Software features

7705 SAR models support, but are not limited to, the following features:

Services

- Point-to-point Layer-2 virtual private network (VPN) services
 - Ethernet VPN - Virtual Private Wire Service (EVPN-VPWS)
 - Virtual leased line (VLL)/Pseudowire
 - Targeted Label Distribution Protocol (T-LDP)-based ATM, frame relay HDLC, IP, Ethernet and TDM Pseudowires
- Multi-point layer-2 Virtual Private LAN Service (VPLS)
 - EVPN-VPLS
 - Route type 2: MAC/IP advertisement
 - Route type 3: Inclusive multicast (without point to multi-point) Ethernet tag route for broadcast, unknown unicast and multicast traffic
 - Route type 4: Multihoming with single active and active-active
 - Route type 5: IP reachability
 - T-LDP-based VPLS
- IP VPN services (IPv4 and IPv6)
- Internet Enhanced Service (IES)

- Circuit Emulation Services (CES)
 - Structure Agnostic TDM over Packet (SAToP)
 - Circuit Emulation Service over Packet-Switched Network (CESoPSN)
 - Metro Ethernet Forum (MEF) 8 - Implementation Agreement for the Emulation of PDH Circuits over Metro Ethernet Networks
- Raw socket IP transport for asynchronous RS-232 serial data

Interfaces

- Ethernet
- Packet over SONET/SDH (POS)
- Asynchronous Transfer Mode (ATM), ATM-Inverse Multiplexing over ATM (IMA)
- Frame Relay (FR)
- High Level Data Link Control (HDLC)
- Point-to-Point Protocol (PPP), Multi-Class (MC) PPP, Multi-Link (ML) PPP
- Time Division Multiplexing (TDM)

Network protocols

- Segment routing (SR)
 - Intermediate System-to-Intermediate System (SR-ISIS) and Open Shortest Path First (SR-OSPF)
 - Traffic engineering (SR-TE)
- MPLS Label Edge Router (LER) and Label Switch Router (LSR) functions
 - Resource Reservation Protocol — Traffic Engineering (RSVP-TE)
 - RSVP-TE Label Switched Path (LSP) shortcuts for Interior Gateway Protocol (IGP) route resolution
 - PCEP support
 - Label Distribution Protocol (LDP) with LFA and remote LFA
- IP routing
 - IS-IS (IPv4, IPv6)
 - OSPFv2 and OSPFv3

- Constraint-based Shortest Path First (CSPF)
- Routing Information Protocol (RIP)
- Border Gateway Protocol (BGP) with multiprotocol extensions
- BGP label unicast routes as defined in RFC 3107
- IPv6
 - IPv6 VPN Provider Edge (6VPE) for MPLS and IPsec VPRN
 - Dynamic Host Configuration Protocol (DHCP) v6 server/relay
 - IPv6 over IPsecv4 tunnels
 - LDPv6
- Multicast functionality at L3 and L2
 - L2 multicasting via Internet Group Management Protocol (IGMP)/Multicast Listener Discovery (MLD) snooping in VPLS with traffic flow from L3 to L2
 - IGMP/MLD snooping translation into Protocol Independent Multicast (PIM) for Routed VPLS (RVPLS)
 - Protocol Independent Multicast – Source Specific Multicast (PIM-SSM) with both IGMPv1/2/3 and MLD v1/2 Label Distribution Protocol (LDP)
 - Next-generation multicast VPNs (NG-MVPN) over MPLS encrypted via Network Group Encryption
- PIM (SM, SSM) stitching via L2 PIM snooping
- Next generation multicast VPNs with MP-BGP MVPN-IPv4 address family and dynamic MLDP PMSI tree
- Targeted LDP (T-LDP)
- Generic Routing Encapsulation (GRE)

SDN

- Topology discovery: BGP-Link State (BGP LS) IPv4 and IPv6
- Path Computational Element Protocol (PCEP) support

Load balancing and resiliency

- IEEE 802.3.ad Link Aggregation Group (LAG) and multi-chassis (MC) LAG
- Pseudowire redundancy
- Primary and secondary LSPs
- SR topology independent loop-free alternate (TI-LFA)
- Fast reroute (FRR)
 - BGP
 - IP (OSPF and ISIS)
 - LDP with loop-free alternate (LFA) policies
 - LDP LFA via segment routing stitching
- Automatic Protection Switching (APS) and MC APS for SONET/SDH
- IPv4 and LDP LSR equal-cost multi-path (ECMP)
- Virtual Router Redundancy Protocol (VRRP)
- Entropy label (RFC-6790)
- Asymmetric delay control over redundant network paths
- Line card redundancy (LCR) for DS1/E1 ports
- Non-stop routing, non-stop services
- ITU-T G.8032v2 Ethernet ring protection switching

Quality of service and traffic management

- Hierarchical QoS (H-QoS)
- Intelligent packet classification, policing, scheduling
- Deep buffering
- Ingress and egress shaping on per forwarding class, service access point (SAP) or VLAN, per customer multi-service site (MSS) and port basis

Operations, administration and maintenance

- IEEE 802.3ah: Ethernet in the first mile
- IEEE 802.1ag: Connectivity fault management
- ITU-T Y.1731: Fault and performance management
- LSP/MPLS statistics

- Microwave performance statistics
- Port mirroring (local/remote)
- Two-Way Active Measurement Protocol (TWAMP), TWAMP light
- ITU-T Y.1564 (RFC 2544) test head
- Per-port and per-SAP loopback with MAC swap
- 10 ms Bidirectional Forwarding Detection (BFD)
- Cflowd including IPFIX
- Auto configuration (plug-and-play) with VLAN discovery
- Event handling system (EHS)
- Simple Network Management Protocol (SNMP) v3
- IP Security (IPsec) encryption over MPLS
- L2 services (VLL, VPLS over GRE) over IPsec
- TCP Maximum Segment Size (MSS) adjustment for IPsec
- Network address translation (NAT)
- Statefull firewall with multi-channel support
- Network Group Encryption for IP/MPLS services, L3 user and control traffic, and select L2 control traffic
- Public Key Infrastructure (PKI) supporting X.509v3 certificates, Certificate Management Protocol version 2 (CMPv2), Certificate Revocation List (CRL), Online Certificate Status Protocol (OCSP), RSA/DSA keys
- FIPS 140-2 compliant

Security

- Secure Shell (SSH)
 - Hash-based message authentication code (HMAC) secure hash algorithms (SHA2)
 - Strong prime numbers for Diffie-Hellman (DH) key exchange
- Dot1x tunneling

Hardware features

The 7705 SAR is available in a range of models to suit a broad range of applications. Select 7705 SAR products are also available with conformal coating as an orderable option to provide added protection against environmental contaminants.

Table 1. 7705 SAR platform specifications (part 1)

	7705 SAR-18 ¹	7705 SAR-8 ²	7705 SAR-X (2 variants based on power supply)

7705 SAR-H modules

The two expansion module slots, provided on the 7705 SAR-H, can support the plug-in modules in Table 4.

Table 4. SAR-H modules

Card name	Details
4-port Ethernet	4 x RJ-45 10/100 Mb/s
Combination T1/E1/RS-232	<ul style="list-style-type: none"> • 2 x RJ-45 T1/E1 • 2 x RS-232
GPS receiver	1 RF port - GNSS

7705 SAR-M modules

The expansion module slot can support one of the following plug-in modules.

Table 5. SAR-M modules

Card name	Details
2-port 10GE ring	2 x XFP 10GE
6-port Ethernet	<ul style="list-style-type: none"> • 2 x SFP 100 Mb/s • 2 x Combo SFP/RJ.5 100/1000 Mb/s • 2 x RJ.5 100/1000 Mb/s with 2 x PoE or 1 x PoE+
Passive CWDM	Mux/demux and OADM variants available with selected wavelengths

7705 SAR-18 X-Adapter cards

The four slots in the left side of the 7705 SAR-18 can be used to house the following X-Adapter card.

Table 6. SAR-18 X-Adapter card

Card name	Details
1-port 10GE/10-port GE card	Configurable to operate in one of the following modes: <ul style="list-style-type: none"> • 10 x SFP 1 Gb/s • 1 x SFP+ 10 Gb/s

7705 SAR-8 and SAR-18 adapter cards

The 7705 SAR portfolio supports an extensive range of adapter cards and modules, optimized to address different network and service requirements. Each of the six adapter card slots in the 7705 SAR-8, or the 12 adapter card slots in the right side of the 7705 SAR-18, can be used to house the following adapter card types.

Table 7. SAR-8 and SAR-18 adapter cards⁶

Card name	Details
6-port 10GE, GE	<ul style="list-style-type: none"> • 2 x SFP+ 10 Gb/s • 4 x SFP 100/1000 Mb/s
2-port 10GE ring	2 x XFP 10 Gb/s
8-port GE	8 x SFP 10/100/1000 Mb/s
4-port OC-3/STM-1 or 1-port OC-12/STM-4	<ul style="list-style-type: none"> • 4 x SFP configurable for SONET or SDH - configurable as 4 x OC-3/STM-1 or 1 x OC-12 STM-4 • Supports TDM and PPP/MLPPP in channelized mode and POS in clear channel mode
4-port OC-3/STM-1 clear channel	<ul style="list-style-type: none"> • 4 x SFP configurable for SONET or SDH • Supports ATM, POS and IP
2-port OC-3/STM-1 channelized	<ul style="list-style-type: none"> • 2 x SFP configurable for SONET or SDH • Supports ATM, ATM-IMA, TDM, PPP/MLPPP and IP
16-port ASAP T1/E1	ATM, ATM-IMA, TDM, FR, HDLC, MCPPP/MLPPP and IP
32-port ASAP T1/E1	ATM, ATM-IMA, TDM, FR, HDLC, MCPPP/MLPPP and IP
4-port DS3/E3	<ul style="list-style-type: none"> • 4 sets (Tx/Rx) of DIN 1.0/2.3 connectors • Clear channel and channelized (on DS3 only) TDM, FR, PPP and ATM service (on DS3 only)
12-port Serial Data Interface v3 (SDIv3)	12 serial ports can be configured as RS-232, V.35, X.21, and RS-422/RS-530 interfaces for TDM, FR, HDLC and IP (TDM-only for RS-232) with additional speeds, synchronization functionality, and maintenance capability
6-port E&M	6 x RJ-45
8-port C37.94 teleprotection card	<ul style="list-style-type: none"> • 8 x SFP LC single-mode or multi-mode • IEEE 1613 Class 2 compliant
8-port voice and teleprotection	<ul style="list-style-type: none"> • 2 x Foreign eXchange Subscriber (FXS) and 2 x Foreign eXchange Office (FXO) ports for analog voice • 2 x ITU-T G.703 co-directional ports • 2 x IEEE C37.94 optical teleprotection ports
6-port FXS voice	3 x RJ-45, with 2 x FXS ports per connector - loop start/private line automatic ringdown (PLAR) signaling
8-port FXO voice	4 x RJ-45, with 2 x FXO ports per connector - loop start signaling
Integrated services	Supports Multi-Drop Data Bridging (MDDDB), PCM multidrop bridging SCADA applications, Voice Conference Bridging (VCB)
GNSS receiver	1 x RF, receives frequency and time from a GNSS antenna
Auxiliary alarm	24 digital alarm inputs, 2 analog inputs and 8 output relays
Passive Coarse Wavelength Division Multiplexing (CWDM)	Mux/demux and optical add/drop multiplexer (OADM) variants available with selected wavelengths
Microwave interface	<ul style="list-style-type: none"> • Interface to Nokia Wavence microwave transport • 2 x SFP 10/100/1000 Mb/s with microwave-aware Ethernet ports • 2 x RJ-45 10/100/1000 Mb/s with microwave-aware Ethernet ports • 4 x SFP 10/100/1000 Mb/s
Microwave power injector	<ul style="list-style-type: none"> • 2 x RJ-45 • Supplies power to Nokia Wavence

⁶ See 7705 SAR Adapter Cards data sheet for more details

Standards compliance

Tables 8 through 12 provide information on how the 7705 SAR variants comply with international regulatory and telecom standards.

About Nokia

We create the technology to connect the world. Powered by the research and innovation of Nokia Bell Labs, we serve communications service providers, governments, large enterprises and consumers, with the industry's most complete, end-to-end portfolio of products, services and licensing.

From the enabling infrastructure for 5G and the Internet of Things, to emerging applications in digital health, we are shaping the future of technology to transform the human experience. networks.nokia.com

ALCATEL-LUCENT/ NOKIA 7705 SAR

Service Aggregation Router Equipment

NOKIA

Alcatel-Lucent 

The Nokia 7705 Service Aggregation Router (SAR) portfolio provides service adaptation, aggregation, and routing over an efficient, feature-rich Ethernet and IP/MPLS/segment routing infrastructure. With interfaces supporting a wide range of access protocols, it is well suited for mobile backhaul, fixed-mobile convergence, mission-critical and enterprise applications.
