

7 BENEFITS OF BUYING REUSED TELECOMMUNICATIONS EQUIPMENT

1. PREMIUM USED TELECOM EQUIPMENT: PICS Telecom only provides products of the greatest possible quality from reputable suppliers around the world. All products undergo our extensive testing processes to ensure they meet our customer's high standards.

2. EXTENSIVE WARRANTY ON REUSED NETWORK EQUIPMENT: PICS offers extensive warranties on its telecom network products to provide peace of mind when purchasing used telecom equipment. All products come with a lifetime warranty and our advanced replacement program.

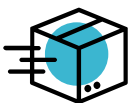

3. SIGNIFICANT COST SAVINGS: Purchasing from an Original Equipment Manufacturer (OEM) can be extremely expensive. By opting for a telecom reseller such as PICS Telecom, customers can expect a cost savings of up to 90%. This value not only allows companies to upgrade their system or replace a part while staying in budget, but often allows for the option to purchase surplus equipment to keep on hand.

4. HARD TO FIND LEGACY EQUIPMENT: Equipment that has reached its EOL (end-of-life) and is no longer produced by the manufacturer can be rare to come by in such a demanding market. PICS has an extensive selection of legacy products from over 1000 OEMs across the world to help find exactly what you need.

5. NO ADDITIONAL SERVICE FEES: Working with a used telecommunication equipment supplier such as PICS, enables customers to keep telecommunications equipment readily available to service existing networks and ensures they are running smoothly without paying ongoing, high-cost service fees to an OEM (original equipment manufacturer).

6. FAST LEAD AND PURCHASE TIMES: With an extensive global inventory across multiple warehouses, generous product selection, and high stock levels, we can consistently provide quick turnaround and reduced lead times. Rely on us for critical spares and advanced replacements to keep your network running around the clock.

7. SUSTAINABLE ALTERNATIVE: Purchasing used or refurbished telecom equipment not only reduces environmental impact of manufacturing new products, but also significantly lowers landfill disposal. Our services are designed to develop the circular economy and actively contribute to a more sustainable planet.
